Motor Brakes With Oil Shear Technology

According to Force Control Industries, the company's MagnaShear motor brake with oil shear technology stands up well in a range of demanding applications. Proven oil shear technology offers a number of benefits: It transmits torque between lubricated surfaces, thus eliminating wear on friction surfaces. A patented fluid recirculation system dissipates heat, a common problem in dry braking systems. The technology also provides a smooth "cushioned" stop that reduces shock to the drive system. These motor brakes are well suited for operations where a motor is reversed each cycle, including loader/unloader conveyors, pallet-return conveyors, pallet turnover, load spade assembly and unloader assembly.

Aerosol Spray For Leak Detection

CRC's Leak Detector allows simplified detection of gas and air leaks in pipes and pressurized systems. It works by forming highly visible bubbles over the point of leakage. This non-flammable, water-based formula contains no oils, silicones or harmful solvents, and the 20-oz. aerosol package enables fast and easy application with no waste or spillage. The product can be used on a variety of surfaces for almost all types of gas. Its "no-odor" formula is NSF P1 Registered for use in meat and poultry plants.
