Wireless Link for Remote Field Sites

The WNM Wireless Network Module from Moore Industries-International can transmit process signals up to a distance of 30 miles between remote locations. By using standard operating frequencies, these units don't require a regulatory license and can typically be installed without performing a radio-frequency site survey. The product can be used with Moore's NCS NET Concentrator System® and other SCADA and distributed I/O systems.

Plug-And-Play Electrical Slip Ring Systems

Deublin notes its electrical slip ring systems are optimized with material configurations already tested and proven for hundreds of millions of cycles. Suited for applications ranging from wind turbines to tooling machines, the flexible design of these systems supports unique requirements and allows for easy retrofits. Available customer-specific features include RF shielding, mixed-signal-handling capabilities, high-frequency impedance matching and reduced

temperature generation, among others.

Comfortable, Disposable Respirators

Magid Glove & Safety's Precision Safety® Disposable IR1970P95 Respirators are designed to filter at least 95% of airborne particles, protect against certain oil and non-oil based particles and provide nuisance relief from acid gas and organic vapors. According to Magid, these NIOSH 42 CFR-approved products can standardize on one filtering face mask what may have previously taken three separate respirators. Comfort-enhancing features include adjustable nosepieces and full face seals.
