Quick-Disconnect Safety Cables

Breakaway safety cables from IMI Sensors help protect technicians and equipment during route-based vibration monitoring by quickly disconnecting if a sensor or analyzer cable becomes accidentally entangled. Designed to withstand harsh environments, they feature EMI/RFI shielding and multiple connector configurations, including two-pin MIL style, BNC plugs or jacks that are compatible with most major data-collector manufacturers.

Updated Equipment Safety-System

Software Version 2.1.1 of Invensys Operations Management's Triconex® Trident™ safety system has two new input modules that enhance worker safety, reduce downtime and deliver more accurate trip analysis in power and turbomachinery applications. One module enables faster response to unsafe equipment conditions; the other optimizes trip data analysis to prevent future upsets.
